

SABRE Vision TV8000 series provide flexible, robust solutions for outdoor applications as well as demanding indoor environments. Both the floor standing and wall mount versions offer a variety of optional peripherals: touch screens, ticket printers, keyboards, cameras, card readers, watch dog etc. This versatility makes the **TV8000** ideal for a great variety of uses.

In its simplest form, the **TV8000** may be used as a public information or advertising display.

With the addition of a touch screen, keyboard or telephone hand set, - it becomes an interactive kiosk; - with a card reader - a security check point, card reader and printer - a pay point. The applications are endless.

For outdoor use, TV8000 kiosks are fitted with both thermostatic and hygroscopic sensors. These will activate a heater or cooling system according to the ambient temperature and also prevents condensation forming. This allows that kiosk to operate below 0°C or in summer temperatures.

The chassis is made from tough, high grade, powder coated steel and has a multi-point locking system for security.

Attack sensors can sound an alarm and alert a remote control center by email. Graphics can be added to brand the kiosk or give instructions.

- 4 e-government
- 4 national parks
- 4 car parks
- 4 security
- 4 theme parks

- 4 schools & colleges
- 4 tourist information
- 4 internet access
